

AIR Mobile 2 (Wireless Display For CineTape 2)

AIR Mobile 2

The AIR Mobile2, the perfect wireless Remote Display for the new CineTape2.

The AIR Mobile2 is a small, battery powered wireless display that mounts onto remote focus/monitor handsets. Its long-range radio provides instant wireless measurements that are displayed on a large LED readout. The radio also has 2-way communication which keeps the AIR Mobile2 settings synchronized with the CineTape2. In addition, connect via Bluetooth to an iPhone for even more user features.

The AIR Mobile2 is linked to the CineTape2 by a 2.4 GHz radio with a solid 500 foot range that is not limited to line of sight. Choose from 40 channels for clear connections. Integrated antennas are internal, so they are protected from damage.

The AIR Mobile2 has a large red LED display showing measured distance, and LED indicators for Sense, Connect, Bluetooth/ Low Battery.

The small removable, rechargeable Sony battery is held in place by a sliding door, lasts an incredible 8 hours, and recharges quickly.

Mounting the AIR Mobile2 to a handheld focus/monitor unit is easy and flexible, with its eight mounting holes and a Mini Dogbone bracket. All of the 1/4 - 20 threaded holes are on a removable plate that is flush with the back surface of the AIR Mobile2. The clever mounting plate can be removed and replaced with a custom plate for specific situations.

As with all Cinematography Electronics products, the quality is built in.

Bluetooth iPhone Connection

Your iPhone, iPad or iPod becomes part of the CineTape2 System with the built in Bluetooth radio and the CINETAPE AIR App. This provides many additional features enabling your Apple device to display and control the CineTape2.

The App and a couple of taps is all that's required to connect your iPhone to the AIR Mobile 2. It's that simple.

CineTape AIR App

The "CINETAPE AIR" App downloaded through iTunes, displays and controls real-time Distance readings, Sensitivity adjustments and Brightness levels. It also provides a SYNC function which optimizes signals when two CineTapes are working together.

The App adds the very useful NEAR and FAR distance limit functions that are adjustable over the complete measurement range, and can be independently switched on or off.
